DETAILED ACTION

1. In response to Applicant's amendment filed April 16, 2007, Examiner has withdrawn the rejection of claims 1-12, 14-23 under 35 U.S.C. 112.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, 14-19, drawn to determining a level or risk in a transaction using stored information describing past transactions.
 - II. Claims 20-23, drawn to deriving high and low categorical information related to a specific transaction.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require both high and low categorical information clusters. The subcombination has separate

utility such as determining fraudulent activity based on geographic location, type of payment, or amount of transaction, for example.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. During a telephone conversation with Michael Glenn on June 19, 2007 a provisional election was made without traverse to prosecute the invention of group I, claims 1-12, 14-19. Affirmation of this election must be made by applicant in replying to this Office action. Claims 20-23 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

EXAMINER'S AMENDMENT

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Glenn on June 19, 2007.

The application has been amended as follows:

Claim 19 has been cancelled.

Claims 20-23 have been cancelled, directed to an invention nonelected without traverse.

8. Claims 1-12, and 14-18 have been allowed.

Allowable Subject Matter

9. The following is an examiner's statement of reasons for allowance:

Claims 1-12, 14-18 are directed towards a computer implemented method for determining a level of risk of a transaction between a consumer and a merchant. The closest prior art of record, the Deaton reference, teaches a method and system for selective incentive point-of-sale marketing in response to customer shopping histories. Specifically, Deaton teaches storing information regarding products, and department of products purchased by a customer, and uses this information to determine a promotion or incentive, such as a coupon, to provide to the customer.

Deaton, alone or in combination with any other prior art of record, fails to teach a computer implemented method for determining a level of risk of a transaction between a consumer and a merchant, comprising storing a plurality of merchant clusters, the merchant clusters determined from statistical co-occurrences of the merchant names in a plurality of transactions, wherein said merchant names are textual data, and applying the merchant cluster in conjunction with data derived from the transaction to a predictive model, and outputting a level of risk of the transaction to detect if the transaction is fraudulent.

Examiner notes that Patent Nos. 7,165,037 6,839,682, 6,330,546 5,819,226 and 6,430,539 are commonly owned by the assignee of the present application, and therefore are not applicable as prior art.
